AI in Assessments – Automated Item Generation

In the assessment space, items are the basis for building intellectual property. Different industries utilize various processes and techniques to ensure the uniqueness and quality of these items. But how do these industries provide the uniqueness, consistency, and quality of the items developed? That's where Artificial Intelligence (AI) will play a vital role.

Company Updates

Excelsoft, affiliated with a **major multinational corporation in the construction sector** for three years, was invited by the client to **develop eLearning courseware for their Water Effluent Treatment (WET) skills training school.**

- The team focused on key elements: **people, technology, realism, context, and ROI.**

- They employed a two-phase approach:

  - Phase I involved applying **Digital Thinking Principles and proposing a 3D virtual environment** as the foundation for the learning experience.
  - Phase II utilized **agile methodology to systemize development** and ensure successful delivery.

- The **immersive solution** helped learners understand WET Plant concepts, tools, techniques, processes, and procedures.
